

Application No. 10/015,677

**AMENDMENTS TO THE CLAIMS:**

This listing of claims will replace all prior versions, and listings of claims in the application:

**LISTING OF CLAIMS:**

1) (Currently Amended) A method for displaying a perceived continuous image across first and second display areas, each display area having pixels of a given size and the pixel size of one display area is different than the pixel size of the other display area comprising:

- providing a first image to be displayed on the first display area,
- providing a second image to be displayed on the second display area wherein the second image is a scaled portion of the first image such that when the images are displayed on the first and second display areas the resulting image appears substantially continuous to a viewer situated to view the image, and
- transmitting the first image to the first display area and the second image to the second display area.

2) (Original) The method of claim 1 wherein the first and second images are provided in a computer readable file.

3) (Original) The method of claim 1 wherein the first and second images are provided by a video camera.

4) (Currently Amended) A method for displaying a perceived continuous image across n display areas, each display area having pixels of a given size and the pixel size of at least one display area is different than the pixel size of at least one other display area comprising:

- providing a first image to be displayed on the first display area,

Application No. 10/015,677

b) providing  $n$  images to be displayed on the  $n$  display areas wherein at least one of the  $n$  images is a scaled portion of the first image such that when the images are displayed on the  $n$  display areas the resulting image appears substantially continuous to a viewer situated to view the image, and

c) transmitting the  $n$  images to the  $n$  display areas.

5) (Original) The method of claim 4 wherein the  $n$  images are provided in a computer readable file.

6) (Currently Amended) The method of claim [[1]]4 wherein the  $n$  images are provided by a video camera.

7) (Currently Amended) A method for displaying a perceived continuous video image across first and second display areas, each display area having pixels of a given size and the pixel size of one display area is different than the pixel size of the other display area comprising:

a) capturing a first video image to be displayed on the first display area,

b) capturing a second video image to be displayed on the second display area wherein the second image is a scaled portion of the first image such that when the images are displayed on the first and second display areas the resulting image appears substantially continuous to a viewer situated to view the image, and

c) transmitting the first video image to the first display area and the second video image to the second display area.
